

Introduction to Image Generation: Quiz

Your score: 100% Passing score: 75%

Retake

Congratulations! You passed this assessment.

check1. What are some challenges of diffusion models?

- ☐ They can generate images that are not realistic.
- ☐ They can be difficult to control.
- ☐ They can be computationally expensive to train.

check All of the above

check2. Which process involves a model learning to remove noise from images?

- ☐ Forward diffusion
- ☐ Sampling
- ☐ GANs

check Reverse diffusion

check3. What is the goal of diffusion models?

- ☐ To generate images by treating an image as a sequence of vectors

check To learn the latent structure of a dataset by modeling the way in which data points diffuse through the latent space

- ☐ To encode images to a compressed size, then decode back to the original size
- ☐ To pit two neural networks against each other

check4. What is the process of forward diffusion?

- ☐ Start with a noisy image and remove noise iteratively
- ☐ Start with a noisy image and remove noise randomly

check Start with a clean image and add noise iteratively

- ☐ Start with a clean image and add noise randomly

check5. What is the name of the model family that draws inspiration from physics and thermodynamics?

check Diffusion models

- ☐ Variational autoencoders
- ☐ Generative adversarial networks
- ☐ Autoregressive models
